Power dependent for high density power converter

Apply now: career@silicon-austria.com
silicon-austria-labs.com/karriere

The Power Lab is looking for research enthusiasts in the areas of:

- Power converter architecture and system engineering
- Control loop algorithms and design in HW and SW
- Multi physical modelling and simulation of all physical dependencies and effects
- Power electronics component and circuit design
- Build up and verification of demonstrators and prototypes
- Behavioral modelling of complete systems including environment

Become part of Silicon Austria Labs (SAL) – the top research center for electronic based systems (EBS). Unfold the future, unfold yourself.

In the network of science and industry, the center offers research in four pioneering divisions: Sensor Systems, RF Systems, Power Electronics and System Integration.

SAL – a great place to research.
