

Java Software Developer (m/f/x)

Graz, Klagenfurt, Linz, Hagenberg, Vienna

Excited about **Java development**? Eager to join a **global leader** that enables **digital transformation**? Looking for teammates who appreciate **open communication** and face **challenges** together as a team?

We have made it **our mission** to ensure that **millions of people worldwide have an excellent user experience**, made possible through a unique combination of observability, automation, and AI—all compacted into one **cloud-based software intelligence platform** to give our customers visibility and precise, AI-backed answers across their entire digital ecosystem.

How we work - minimum red tape and maximum autonomy

- We are a very international, colorful community contributing to **one single, market-leading product**: The Dynatrace software intelligence platform.
- Each team is fully self-managed and works closely together with the Product Owner and Product Management to deliver value. As a whole organization, we are working in a **highly agile and fully technology-focused environment** where everyone speaks the same language.
- We run our **software development cycle on an extremely high level of automation**, making it tremendously easy for teams to push their changes from concept to production at light speed.
- To power digital services, organizations are shifting from traditional on-premises data centers to **multi-cloud environments** with **Kubernetes** as the orchestration layer. These environments are dynamic, with applications, microservices, containers, and infrastructure coming and going in seconds, and a volume, velocity, and variety of data that's beyond human capacity to manage. We are **not only required to process data on a massive scale** but also to think about scalability, starting from down to the level of processing these amounts of data.

What you could be working on

- Depending on your preference and strengths, there are several different focus areas you could potentially be working on such as:
- **Storage and Analytics Systems** – Applied high-performance computing, finding new ways of processing immense data payloads, storage, and applied analytics, using Java, Kafka, Spark, Lucene, Kubernetes.
- **Application Security** – Vulnerability detection and risk assessment for cloud-native applications across the entire software development lifecycle. Here we are searching for full-stack developers with Java and Angular, or frontend/backend only.
- **Software distribution system** – Enabling our customers to use the full range of our product, including custom extensibility. We are searching for Java, React, Typescript, Python, and Angular developers.
- ... and there are **many more amazing features to our platform**. Are you interested in learning more?

Your profile

- **Technical studies** related to software engineering (or similar)
- **Experience in Java development**
- Understanding of Software Architecture
- **Team player** and pro-active (wo)man of action
- Excited to **learn new technologies**

Due to legal reasons we are obliged to disclose the minimum salary for this position, which is € 38,010 gross per year based on full-time employment (38.5 h/week). We offer a higher salary in line with qualifications and experience.
