

## Project Planner Responsible (m/f/d)

Danieli Construction International operates worldwide with own handling and transportation equipment and through specialized and trained people covering a full range of services related to Civil and MEIP (Mechanical, Electrical, Instrumentation, Piping) installations for industrial plants.

For one of our Project in Europe, we look for Project Planner Responsible to support our Project Team in Austria.

Develop comprehensive implementation strategies and incorporate deliverables into project schedules. Prepare project life cycle and master schedules. Integrate all schedules (design disciplines, vendors, production, and construction) and provide a comprehensive project perspective. Monitor, evaluate risks, and present recovery/mitigation plans to support turnover/opening schedule. Perform earned value analysis when needed. Provide progress reports and management presentations, as appropriate. You will report to Executive Project Controls.

To ensure success you need to multitask effectively in a fast-paced, dynamic environment, and perform your duties in a manner that maximizes profits.

### Responsibilities

- Develop and maintain project life cycle and project integrated schedules using Primavera
- Prepare project plans and work with scoping/strategy documents to develop integrated project master schedules
- Coordinate with project teams and disciplines to develop an appropriate level of detail for schedule activity definition to support project monitoring and reporting needs
- Conduct and lead planning and coordination meetings as required to collect information in support of planning and monitoring functions
- Ensure effective application of appropriate policies and procedures, including project planning/scheduling procedures and reporting requirements
- Collect/report progress, evaluate variances, develop workaround plans, and coordinate resolution of variances.
- Conduct manpower/materials commodities loading/resource/tracking analysis and progress curves as required with the team
- Produce reports and presentations as required to support project needs and management reporting
- Assist in preparation of the schedule reporting specification for the contract bid packages and determine Schedule Milestones and/or Key Dates for oversight by the Project Team members.
- Scope of responsibility may include any of the following depending on project size: show/ride concept development, show, ride, facility, and area development design, show and ride production and installation, show and ride test and adjust, show programming and building construction disciplines

## Requirements

- Bachelor's degree in engineering (Mechanical or Civil) is a must
- Provenance from Infrastructure Market is a must, Chemical/Power Plant Construction preferably
- Understanding of Engineering systems, terminology, and steel making plant processes
- Knowledge of German and English is a must (B2 level)
- Able to read and development of Gantt charts
- Strong writer to develop specifications
- Good organizational and time management skills
- Strategic planning skills
- Strong negotiation skills
- Strong interpersonal and communication skills
- Ability to make decisions and exercise good judgment
- Ability to manage and work well with others
- Proficient computer skills (Word, Excel, PowerPoint, and Access)
- Available to work extended hours under stress
- Willingness to relocation abroad
- Valid drivers' license

## Working Environment

You will work at our site facilities in Leoben (Styria) in a multi-cultural environment, with possibility to be relocated at the end of the Project.

The minimum salary for this position under the collective agreement is € 4,269.07 (14 times per year). The actual salary depends on the respective qualifications and professional experience and ranges from € 4,269.07 to € 4,752.54.

Please send us your application with resume and diploma.
