Professionals
Full-Time 38.5 h
Permanent

Your Tasks

- Collaborate with the development team to understand and review software requirements, identify test scenarios, and create and execute manual and automated test cases that cover different aspects of the software functionality
- Track and manage reported defects, including capturing relevant details, prioritizing issues, and collaborating with developers to facilitate timely resolution
- Perform regular updates and maintenance tasks on existing manual and automated test cases, test environments, and testing tools to ensure their effectiveness and relevance in an agile software development environment
- Incorporate exploratory testing techniques to proactively investigate and uncover potential software defects
- Ensure the quality and reliability of our medical software applications, and contribute to the overall success of our software development projects

Your Profile

- Bachelors' degree or higher degree (University, FH) in a technical field or equivalent technical education; ISTQB certification is a plus
- Expertise in test case design methodologies and proficiency in test automation frameworks like Appium; knowledge in database testing as well as in web and mobile application security testing is a plus
- Programming skills in an object-oriented high-level language
- Very good English skills, both written and spoken; German is a plus
- Positive attitude and team-oriented, good communication skills, self-reliant and accurate approach to work, strong analytical problem-solving abilities, and a collaborative mindset for effective teamwork
